ALEXANDRIA, VIRGINIA 22314-2700

An opalescent glass-ceramic product, especially for use as a dental material or as an additive to or component of dental material, including SiO<sub>2</sub>, Al<sub>2</sub>O<sub>3</sub>, P<sub>2</sub>O<sub>5</sub>, Na<sub>2</sub>O, K<sub>2</sub>O, CaO and Me(IV)O2. In order to obtain improved opalescence with improved transparency, in addition to fluorescence, thermal expansion and a combustion temperature adapted to other materials, the opalescent ceramic product is completely or substantially devoid of ZrO2 and TiO2, such that the Me(II)O content in the glass ceramic is less than approximately 4 wt% and the  $Me(IV)O_2$  content amounts to approximately 0.5 - 3 wt%. The invention also relates to a method for the production of the opalescent glass-ceramic product.
